

TERRARIUM KIT

1. Wash your glass container in hot soapy water, and dry.
2. Put a 1/2 inch of gravel at the bottom of your container.
3. Add a layer of a 1/2 inch of charcoal.
4. Soak your moss for 10 minutes, squeeze excess water and layer.
5. Add 2" of potting mix.
6. Arrange your plants on the table to get an idea of how you'd like to plant them.
7. Dig holes for the plants with a spoon or your fingers.
8. Unwrap the fabric from your plants and plant them in their new home.
9. Add accessories to your terrarium.
10. Only add a little water at a time, you don't want to drown your plants. Water down the side of the container so you don't disturb the plants.
11. Put the lid on.
12. Place you terrarium in bright light, where it will NOT receive direct sun. It will get too hot inside if placed in direct sun.

ENJOY!

TIPS:

-Be creative, add soil in different depths to create an interesting landscape

-Add tiny accessories

-Don't let the soil dry out completely, but also don't over water. Your terrarium is a closed environment, it should only need to be watered every other week.

-If the soil looks very wet or the terrarium is completely fogged up, open the lid to allow for some evaporation for a day.
